 Subject: Score over length search, 09/925,139

Hi Paul,
 Could you please run a score over length search against the nucleotide sequence corresponding to nucleotides 1631 to 1769 of SEQ ID NO:3 from the above entitled application, where the lower limit is 8 nucleotides and the upper limit is 50 nucleotides? I need anything above 70% identity, and please use all the hits you can import into excel.

Thanks,
 Doug Schultz

PS. I'm a little slammed right now and should be able to get the application numbers of those that I've asked for the excel summary on Monday afternoon. If it's not overly burdensome, would you include them in future search results?
